

PORCELAIN CERAMIC RAINSCREEN

North Middlesex RHS - Townsend, MA

Vertical Running Bond Creates Visual Appeal for Area High School

[SMMA](#) has created another award-winning high school. [North Middlesex Regional High School](#), located in Townsend, MA, has a beautiful and energy-efficient [Ceramic5](#) facade. The 2'x4' tiles emulate natural stone and are installed in a vertical running bond. The textured panels have a full natural range of colors across the building without concerns of a repeated pattern.

An adjustable ECO Cladding sub-framing was used on this building to allow for insulation and featured an architectural clip detail.

Panel Type: Ceramic5

Architect: SMMA
