

TERRA COTTA RAINSCREEN

Davenport Central Fire Station

Historic Fire Station Receives a Terra5 Terracotta Face-lift

When the fire bell rings, The Galante Architecture Studio in Cambridge, MA is usually the first on the scene. Davenport Central Fire Station wanted to restore the historic masonry building to its former grandeur and to significantly expand it so that it supports the firefighters' efforts to protect the City for the next century. The station is the oldest operating fire station west of the Mississippi.

Terra5 terracotta rainscreen cladding was a perfect choice to add a modern design and module size.

Panel Type: Terra5
Architect: Galante Architecture
