

SWISSPEARL® FIBER CEMENT RAINSCREEN

Rutgers University - Piscataway, NJ

Interior Fiber Cement Application for this University Icon

FLAD Architects designed Rutgers University Chemistry and Biology Laboratory. The exterior incorporated a terracotta rainscreen and the interior used white Swisspearl® fiber cement panels.

Swisspearl® panels are an excellent choice for interior applications. Classrooms, hallways and the entrance incorporated large format fiber cement panels. The panels created a graph pattern on the wall, instead of typical drywall, while providing a high traffic finish.

Panel Type: Swisspearl® Fiber Cement

Architect: FLAD Architects
