

SWISSPEARL® FIBER CEMENT RAINSCREEN

Maury Elementary School - Washington, D.C.

A modern & timeless façade for a historic cornerstone primary school

[DLR Group](#) designed the newly-renovated Maury Elementary School which offers 21st century educational spaces to enhance learning. The black and white Swisspearl fiber cement panels provide a modern & timeless appeal to the building. The School was originally constructed in 1886. The updated design complements the surrounding historical residential architecture styles while also offering a modernized learning environment. A glass-edged discovery commons seamlessly connects the historic and new components of the school, celebrating the original iconic historic cornerstone building and amplifying transparency of the indoor-outdoor connections. ECO Cladding subframing addressed the community's desire for an environmentally focused, thermally broken attachment system.

Panel Type: Swisspearl®

System: [ECO Cladding VZ.10](#)
