

FIBER CEMENT RAINSCREEN

Rowan Rutgers Joint Health Science Center

A modern new anchor complementing the revitalization of downtown Camden, New Jersey

[HOK](#)'s Philadelphia office selected a concealed Swisspearl® fiber cement panel for a stunning facade on the new Rowan Rutgers Joint Health Science Center in downtown Camden, New Jersey. The new building will serve as an anchor to the continued revitalization of Camden. Vertical fiber cement rainscreen panels were utilized in two colors which contrasted with the building's frosted glass curtainwall.
