

TERRA COTTA RAINSCREEN

Fort Lewis Fire Station – Tacoma, WA

A maintenance-free terracotta façade for Fort Lewis Fire Station #4

The US Army Corps of Engineers designed the reclad of the current Fire Station #4 at Joint Base Lewis-McChord in Tacoma, WA utilizing Terra5 TC18 terracotta rainscreen panels and an engineered Alpha Vci.45 subframing system from ECO Cladding. The TC18 terracotta system allowed the design team to provide an updated, high-performance facade while still complementing other surrounding buildings on the base.
