

SWISSPEARL® FIBER CEMENT RAINSCREEN

Beachside Private Residence

A Modern Residence With An Elegant Lap-siding Facade

For this private residence, the design team at Roger Ferris + Associates incorporated Swisspearl® fiber cement panels in Onxy to create an elegant lap-siding for the exterior facade. This thoroughly modern residence is a dramatic example of fiber cement for residential construction.

The fiber cement rainscreen was installed using an ECO Cladding sub-framing system for ease of installation and the ability to match cavity depths with some of the projects window systems. The building is stunning from all angles and the Swisspearl® panels act as the strong white palette to allow the glass and glazing to speak and define space.

Panel Type: Swisspearl®

Architect: Roger Ferris + Associates
