

TERRA COTTA & CERAMIC RAINSCREEN

# Osage Nation Visitors Center

*Energy-efficient Rainscreen Façade for this Leading Visitors Center*

[Collins Woerman of Seattle](#) incorporated two rainscreen materials for this striking visitor's center facade. [Terra5](#) terracotta and [Ceramic5](#) porcelain rainscreen cladding panels were used to create an energy-efficient exterior facade.

As you approach the building, the roof's dramatic lines create a memorable impression for the entire building. The terracotta and ceramic panels are supported using an integrated sub-framing solution from [ECO Cladding](#).

Panel Type: Terra5 & Ceramic5

Architect: Collins Woerman
