

TERRA COTTA RAINSCREEN

University of Washington - Seattle, WA

Terra5 Rainscreen for this Dynamic Hub of Student Learning

Students at the University of Washington have a new space to learn and grow. Named in honor of Bill & Melinda Gates, this newest addition is a dynamic hub for classrooms, technology labs and meeting rooms along with a cafe and a "flexible" event space.

Designed by Seattle based LMN Architects the building's rainscreen facade incorporates terra cotta panels from the Terra5 product line with an Alpha Vci.27 sub-framing system. The earthy "Pumpkin" color was chosen in matte and gloss finishes with both flat and grooved surfaces to create a multi-faceted aesthetic which provides a rich and distinct visual for the building's envelope.

Panel Type: Terra5
Architect: LMN Architects
