

Marriott AC Hotel – Bridgewater, NJ

A Modern, Maintenance-free Fiber Cement Façade for AC Hotel Chain

[BASE4](#) Architects designed the new Marriott AC Hotel with a Swisspearl fiber cement rainscreen facade and a thermally-broken ECO Cladding Vci.40 sub-framing system. For this modern hotel chain, Swisspearl's Avera and Carat series were selected to provide a high-quality, maintenance-free exterior façade. For the panel subframing, the adjustable Vci Alpha brackets are thermally broken and create an engineered wall solution. The 1.5" adjustability of the bracketed system allowed for a fast and worry-free installation.

Panel Type: Swisspearl®
System: [ECO Cladding Vci.40](#)
