

TERRA COTTA SUNSCREEN

National Labor College – Silver Spring, MD

An elegant fired-clay sunscreen element for this higher education building

[Terra5 Louver](#) sunscreens were incorporated in the design by [RMJM / Hillier](#) for the National Labor College in Silver Spring, MD. For this design, the west elevation of the campus building features a combination of glass curtainwall and fired-clay terracotta louvers that integrate into the traditional brick façade of the campus. The elegant louvers screen the building from heat while providing the interior ample natural filtered sunlight.

Panel Type: [Terra5](#) Louvers

Architect: RMJM / Hillier
