

PORCELAIN CERAMIC RAINSCREEN

Templeton Elementary School – Templeton, MA

A Modern Sustainable School Building for a Rural Community

[SMMA Architects](#) was selected to design a master plan for three elementary schools in the Narragansett Regional School District, tasked with designing to provide a next-generation model for education. The new and enhanced footprint of the previous buildings has provided a 21st-Century school, a model for educational programming and sustainability. One of the defining features of this project was the use of an energy-efficient Ceramic5 Porcelain Rainscreen facade with the stone series, for a high-performance, maintenance-free stone shingle aesthetic.

Panel Type: [Ceramic5 Stone Series](#)
